

Overview

Rakks Adjustable Bookend Bracket is used in conjunction with Rakks Aluminum Shelves and provides a sturdy and adjustable bookend for shelves up to 14" deep. It is available in two sizes, six inch and eight inch. Shown in Figure 1 is a 12" aluminum shelf with an 8" bookend. This bookend is a cold rolled steel wire form and is powder coated in a silver color. The wire form is attached to an aluminum slide, which moves laterally in one of the channels on the underside of the aluminum shelf and is affixed in any desired position by a small knob.

Installation

1. Determine where you would like your bookend to be situated on the shelf.
2. Glide the bookend's slide onto the second rear channel on the underside of the aluminum shelf.
3. Tighten the small knob to secure bookend to shelf.
