Rakks Shelf Bridge Clips Information & Installation

Shelf Bridge Clips (SA-BRIDGE) provide a way to secure aluminum extruded shelves to L-Brackets with the retaining pin option. We recommend using Shelf Bridge clips with mitered tie poles to keep the poles from racking side to side.

Note: shelf bridge clips are only needed at the front channel of the top shelf section.

To install: locate bridge clips into front channel of the shelf being careful to orient the pinholes as shown below. Install and tighten the setscrews to hold the Bridge clip in place flush with the edge of the shelf. Place the shelf section on the L-Brackets so that the bracket's retaining pins fit into the pinholes. Adjust the bridge clip as needed to fit over the retaining pins.
